SUMMARY

M.Sc. Web Engineering student at Chemnitz University of Technology with over 4 years of experience as an SAP HANA Developer and SAP BI/BW Consultant. Experienced in implementation, migration, and support projects, with a strong focus on data modelling, BI reporting, and system optimization. Seeking a Werkstudent role where I can apply my enterprise data expertise and my current studies in web engineering to modern web and cloud solutions.

TECHNICAL SKILLS

SAP & Data Modeling: SAP HANA (Calculation Views, SLT, SDA, Analytic Privileges, Table Functions, Attribute Views, Analytic Views, Calculated & Restricted columns), SAP BW/BI (DSO, InfoCube, MultiProvider, DTP, Process Chains)

Tools: SAP BusinessObjects (BOBJ, Web Intelligence, Design Studio), SAP Analysis for Office, BEx Analyzer, Blue Prism RPA, ServiceNow, GitHub, Power BI, SAP HANA Studio

Databases: PostgreSQL, SAP HANA

Data & Analytics: ETL Pipelines, Data Modelling, BI Reporting, Data Quality Analysis

Languages: SQL, Java, JavaScript, C++, Python

Frameworks & Libraries: FastAPI, Streamlit, SQLAlchemy, Swagger (OpenAPI)

WORK EXPERIENCE

02/2022 – 10/2023

Deloitte Consulting
India Pvt. Ltd

Analyst, SAP HANA Developer

- Designed end-to-end data models and developed Calculation Views in SAP HANA Studio as the final reporting layer for the finance domain.
- Developed table functions (SQLScript) to implement complex calculation logic used in Calculation Views.
- Loaded data from SAP ECC and flat files into SAP HANA using SLT, and integrated external data sources using Smart Data Access (SDA).
- Developed complex BOBJ reports and integrated HANA views with SAP BusinessObjects Design Studio.
- Optimized finance Calculation Views by pushing logic down to the database layer and restricting data with input parameters, reducing report load time by approx. 50% (from ~30 s to ~15 s).
- Migrated HANA objects and transported content from development and test to production using delivery units.
- Gathered structured and ad hoc reporting requirements and business rules from finance stakeholders.

09/2019 – 02/2022

Accenture Pvt. Ltd.

Application Development Analyst, SAP BI/BW Consultant

- Automated 26 recurring month-end ticket activities using Blue Prism RPA, building one automation per activity and reducing manual effort by approx. 50 hours per month.
- Supported month-end and year-end financial closing activities.
- Built BEx Analyzer queries using filters, navigational attributes, variables, and calculated and restricted key figures, enabling drill-down and summarized analysis.
- Monitored BW process chains and daily data loads (PSA to data targets), analyzed recurring InfoPackage failures, and ensured jobs finished within the agreed schedule.
- Resolved customer tickets by severity and delivered long-term fixes through root cause analysis.
- Maintained BW objects (DSOs, InfoCubes, MultiProviders, DTPs, InfoPackages) and handled change requests on data models, process chains and reports.
- Contributed to requirements gathering and mapping of existing processes to SAP BI, and documented all support activities.

EDUCATION

10/2025 – Current	Master of Science (M.Sc.) in Web Engineering
Technische Universität Chemnitz	- Databases and Web Technology - Cloud and Web Applications - Current Trends in Web Engineering - Advanced Data Management
08/2016 – 03/2019	Bachelor of Engineering (B.E.) in Computer Engineering
NBN Sinhgad School of Engineering	- Data Structures and Algorithms - Database Management Systems - Operating Systems - Software Engineering - Web Technologies

PROJECTS

- 1) German Road Accident Data Platform | github.com/PriyankaBhorkar/German-Accident-Data-Platform
(Python, FastAPI, PostgreSQL, SQLAlchemy, Streamlit)
 - Built a full-stack platform that integrates open government data (Unfallatlas, regional indicators, AGS/GV-ISys keys) into a single PostgreSQL database through an ETL pipeline.
 - Developed a documented FastAPI service (Swagger/OpenAPI) with filtering and cross-source statistics, such as fatal-accident and bicycle-risk rankings by district.
 - Created a Streamlit dashboard with 5 views (regional accident rates, accident explorer, and more) and returned data-licence metadata (DL-DE-BY-2.0) with API responses.
- 2) Attribute Naming Convention Analyzer | github.com/PriyankaBhorkar/Attribute_Naming_Convention_Analyzer
(Python, Streamlit, Pandas, Altair, ReportLab)
 - Built a data quality tool that analyzes column naming in CSV and JSON datasets, detects 9 naming styles (snake_case, camelCase, PascalCase and others) and flags ambiguous attributes.
 - Calculated the dominant style and a consistency percentage, shown on an interactive dashboard with KPI cards and charts, and added PDF report export.

CERTIFICATIONS

- Microsoft Azure AZ 900 Fundamentals
- AWS Certified Cloud Practitioner
- Certified in Automation Prime Blue prism
- Certified in Japanese language proficiency test

AWARD

Spot Award, for outstanding contribution to project delivery
